

Total Lung Therapy

PRODUCT INFORMATION

WHAT IS TOTAL LUNG THERAPY?

Total Lung Therapy is formulated to cleanse the respiratory tract and provide total support for the respiratory system. It is a powerful healing and therapeutic formula to aid people with chronic lung ailments (ex. Asthma) and is ideal for those who are simply looking to ensure optimal respiratory health.

HOW IT WORKS

Optimal lung function is vital for your body to receive the oxygen it needs, in order to power your bodies every process. If the respiratory tract is not in good health, it can become sluggish and result in congestion and/or poor functioning.

Total Lung Therapy has 3 major functions

1. It works to cleanse the respiratory system by expelling mucous from deep within the respiratory system.
2. It works to sooth and heal the tissue of the respiratory tract.
3. It protects and strengthens the respiratory system.

Total Lung Therapy can be used by asthmatics and those with other lung ailments to help cleanse, protect, and heal damaged tissue in the respiratory tract. It can also be used by people who are healthy to proactively cleanse and protect their lungs and by smokers and ex-smokers who need extra lung support and cleansing. It is a perfect preventative for people who live in large cities where air pollution is an issue, in order to reduce the negative effects of long term exposure.

DIRECTIONS FOR USE

Take 3 capsules in the morning on an empty stomach.

WHAT TO EXPECT

Total Lung Therapy is designed to cleanse and heal the respiratory system, improve its function and provide antioxidant protection. The need to clear mucous more frequently may be experienced during the first 14 days. This is normal and beneficial. If there is a chronic condition such as asthma, there may be an improvement of symptoms and increased ease of breathing.

SUPPORT PRODUCTS

Ultimate FloraMAX is a 50 billion culture, 10 strain probiotic formula. Research has shown that probiotics may be useful for preventing respiratory infections. In 2008, Canadian researchers published a systematic review to evaluate the evidence for probiotics to treat allergic rhinitis and asthma (Vliagoftis et al). The study author's concluded that probiotics may be beneficial for allergic rhinitis in terms of both reducing symptoms and medication use.
